

## Videx signs as UK distributor for XPR Access Controls

Videx is to widen its product portfolio by identifying other products and services complimenting the current range. Access control is the natural choice and the result is a UK distribution agreement with XPR.

Designed for residential, commercial, local authority and small to medium size industrial companies in mind, O2LA is a 'Plug and Play' system providing access control for two door entrances. It can be easily scaled up to multi door solutions using expansion kits. Quick and easy installation are key features as the system has only a single controller together with a power supply unit.

A professional version of the O2LA is available also which comes with management software, enabling the customer to manage his security set-up or interface with the key via an RS232 port.

With the XPR UK distributorship, Videx Security has firmly established itself in the access control market. The O2LA kits are the first of a planned series of introductions which in time will include codelocks, proximity readers including biometric readers, keypads and many other technologies.

Videx is marketing a range of XPR products that are already acknowledged throughout various overseas markets for quality and flexibility. XPR itself has been established for nearly 20 years and has offices in Brussels, Bangalore and Goa with representation in Belgium, France, Germany and India.
